Infant Security Systems

FOR COMPLETE INFANT SAFETY

Complete solutions from the industry experts

With over 20 years providing infant security systems, only Accutech has the expertise to offer you high-quality, economical infant security solutions with the customer service you expect.

Our full spectrum of upgradeable security platforms fits your budget and your facility – for today and tomorrow.

- ES 2200 – the upgradeable, proven Accutech platform with perimeter protection at an affordable cost
- IS 3200 – software-enhanced, password-protected system capable of monitoring multiple floors
- IS 3300 – the pediatric beaconing system for greater tag assurance
- BR 4200 – the total package, including a tamper-proof system with Intelli-Band technology that alarms upon band removal
- BR 4300 – the premier system that offers tag beaconing with band removal and band compromise alarms for greater awareness

With Accutech, you get the affordable infant security solutions you need for complete peace of mind. You can trust our leading technology to ensure your patients' safety.

Growing demand for security

Parents rely on you to keep their babies safe and secure from birth until discharge. Liability concerns require facilities like yours to take preventative measures to meet this need.

According to the federal Joint Commission on Accreditation of Healthcare Organizations, one of the leading reasons for infant abduction is inadequate security systems. JCAHO recommends that nurses be aware of visitors to the nursery and postpartum areas. But with staffing shortages at many hospitals, 24-hour vigilance is not possible without a reliable security system to keep newborns and their mothers safe.

That's why Accutech offers the latest technology that is easy to use, maintain and upgrade. Our systems allow your patients complete freedom with total peace of mind. With Accutech's experience, quality and service, we can help you choose an infant security system that addresses your security issues so you can continue to provide excellent care for all your mothers and babies.

Portable tag activator/
deactivator

Pediatric and infant
security bands

Accutech systems are built
for long-lasting durability

Accutech's competitive advantage

Accutech offers:

- A tamper-proof Intelli-Band system to help prevent unauthorized personnel from removing infants' bands.
- Bands that shrink to fit during the first 48 hours of post-birth weight loss. Only the band comes into contact with baby's sensitive skin. Tags are reusable and water-resistant.
- A one-year, non-prorated warranty on all parts and service to ensure your system's quality. Or choose an extended warranty for up to four years of protection.
- Guaranteed performance. All systems meet FCC, NFPA, NEC and UL requirements, and are rigorously tested for fire, shock and performance.
- American-manufactured systems to support economic growth at home.
- Financing options that allow you to choose a system that meets your budget.
- A start-up kit with every new system. Our exclusive kit includes everything you need – including a tag activator/deactivator (TAD), test tag and zone tag – to easily utilize and maintain your system for years to come.
- Free software updates with a one-time software license fee.
- Modular design for easy installation of new systems and upgrades.
- Interference prevention with the 418 MHz radio frequency.
- Superior customer service. We have a network of 24-hour local service providers that provide quick and economical service to keep you running safely.
- Software-enhanced, hardware-driven systems. Unlike competitors' software-driven systems, Accutech systems maintain perimeter security, even if your computer goes down.
- Contract pricing – Government, GPO and corporate pricing, as well as bulk pricing on disposables.
- Zero footprint – keyboards with built-in CPUs and wall-mounted, flat-screen monitors require no countertop space.
- Protection for infants, pediatrics, assets and adults under one system.

Product comparison chart

	ES 2200	IS 3200	BR 4200
No enrollment needed for instant perimeter protection	•	•	•
Modular design – easy installation and upgrades	•	•	•
Hardware-driven	•	•	•
Wired to backup power	•	•	•
418 MHz frequency	•	•	•
